

College Service Area Populations (Zip Code Based Estimates)

The following shows the Dallas County service area population as determined by population *residence*. Working commuter traffic flows toward urban and away from rural areas during the day are not reflected. In addition, out of county students are not reflected in the college service area populations.

= Shared Zip Code

For reporting ease, an entire zip code population is included if any portion of the zip code is contained within a college's service area. Thus, zip codes shared by two or more colleges are counted for each college. This generalized approach may differ from an individual college customized estimate which addresses shared zip codes differently and/or calculates population at the census block or track level.
